Carolyn

Yes, we will provide the as built plans and O&M schedule for the [Ex. 6 Personal Privacy (PP)] residence once everything has been finalized.

With respect to submitting proposed system designs/layouts prior to installing any future mitigation systems, in order to keep the process moving forward quickly and to get the systems installed as expeditiously as possible, I recommend that we continue to move forward similar to how we approached the [Ex. 6 Personal Privacy (PP)] residence. I am confident that our vapor mitigation system contractor will install a system that is acceptable to the EPA and do not want to unnecessarily delay the installation of any pre-emptive vapor mitigation systems while we are awaiting regulatory review. Several systems may need to be installed and adding this extra step of report preparation and regulatory review on the front end will most certainly cause delays for the project as a whole.

Alternatively, maybe we can just prepare and submit a generic VI mitigation O&M plan that will be used for all systems if that is your primary concern? Please let me know if this is acceptable.

Also, as an FYI, we are already scheduled to initiate the VI mitigation system install activities today at [Ex. 6 Personal Privacy (PP)] and have already completed the initial pilot fan extension test in order to properly size the mitigation fan and determine the appropriate number of extraction points. We anticipate the installation activities to be completed by the end of this week.

Sincerely,

Hi Brad,

Please provide the as-built mitigation plan and O&M plan for the [Ex. 6 Personal Privacy (PP)]

We have discussed and approved the approach Ex. 6 Personal Privacy (PP). However, for future systems, please provide the VI mit work plans to EPA. The workplans should include O&M plan for the mitigation system. After the system installation, as built design should be submitted to EPA for documentation purposes.

Thanks.

Carolyn
